Introduction/Background: Provide a brief overview of the problem, existing literature, knowledge gaps, and the study's significance.

Methods: Clearly describe the, study design, study setting, population, sampling method, number of participants, inclusion/exclusion criteria, study tools/intervention, outcome variables and their measurement, statistical analysis methods, and ethical approval.

Results: Present subject details, outcome variable frequencies, subgroup comparisons, and relevant statistics (e.g., SD, 95% CI, p-values).

Conclusion: Summarize key findings and implications. Support conclusions based on the results. Briefly discuss generalizability and study limitations where applicable.

Key words:

First, second, third, fourth, fifth
